

**AMENDMENTS TO THE SPECIFICATION**

The first paragraph, lines 4 and 5 of page 2:

“package to “pillow.” “Pillowed” packages are negatively received by the consumer. Also, natural food products such as swiss-type cheeses are affected by atmospheric oxygen (O<sub>2</sub>) during the transporting and storing of this type of product in a package. If the permeability of O<sub>2</sub> is ~~to~~ too rapid, the product “life” is shorter. Shorter product life affects the financial aspects of the product. Therefore, these ~~inherited~~ inherent problems which are associated with respiring food products such as swiss-type cheeses must be addressed by utilizing film structures and packages made therefrom which will deal with these problems in an efficient manner. In addition to addressing the above problems, the film structures and packages must also provide stiffness, moisture barrier and maximize flex crack resistance. Also, the film structures and packages must be cost-effective.”
